#### HP SOLUTIONS DAY 2019

# Unmanaged Devices

Black Holes on Your Network

2019-05-08 Stefan Dydak CISSP, CFE

### The Internet of Vulnerabilities

### When Worlds Collide

Sense, capture/create, connect, and collaborate

PHYSICAL

People, places and things

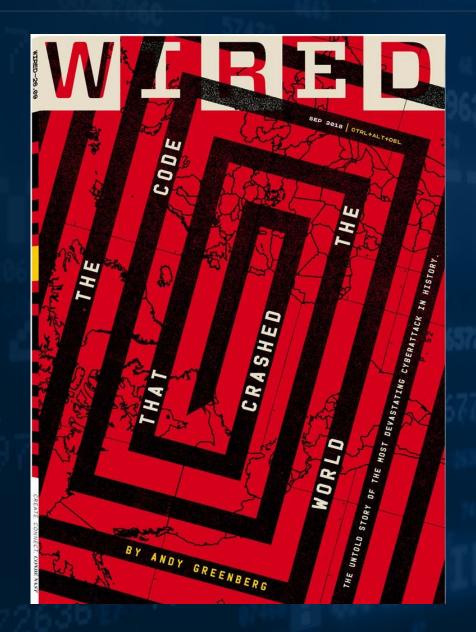

Compute, analyze and communicate

DIGITAL

Produce, modify, and automate

## Digital Risks become Physical

"I see Endpoints as commodities"

"My Next Generation endpoint protection Suite adequately monitors all my endpoints"

Three reasons for avoiding the endpoint security decision

"Printers – what's the worst that can happen?"

### September 2018

Norwegian Parliament shut down several MFPs due to security concerns and investigation following possible foreign intelligence/espionage situation.

"compromised room" in parliament.

### Printernekt på Stortinget etter spionpågripelsen på fredag

Det står skrevet store advarsler på printerne i deler av Stortingsbygget, etter at en nå spionsiktet russer deltok på seminar der.

suspicion of spying while Norwegian authorities sealed off what was described as a

### First "Printer" Hack ... 1963

Spies in the Xerox

Machin

How an engineer helped the CIA snoop on Soviet diplomats.

By Dawn Stover

DURING THE DARK days of the Cold War, when the world trembled at the sight of aerial photos of nuclear missile sites in Guba, when secret agents slipped back and forth through the Iron Curtain, and swift U-2 airplanes flew Xerox 813 Special. Here's what you get for \$1.08 a day.

copyling paper and ? Xenon enpower are the only coplete. that see ordinary paper. There are

ne specially treated papers for you to year regular after Cameras may have been hidden money betrieflessel.

on I Coupe P. iding nurbous paper. Instead, Ortstead map to High a DE. need forms, prior en, job spece, stateanything printed, There's more than ek day essent is in the ELS bear.

Where you you see the BIA? At any Xerry office. Or if you want,

we'll being the fill to you. Just wall, Xeries Corporation, Backment, New York 1000, Offices in principal U.S. oblice, Canada, Xeron of Canada,

Limited, Tanana, Greeners, Rich. Name and Add Ass. about of Francis Normale Con-Lady Tokyo, buch jointly award with Rank Organica.

in copiers all over the world.

This drawing is from patent 3,855,983, issued to Zoppoth in 1967 for a miniature surveillance camera.

### PC Firmware Hack for all

BIOS hacking is becoming mainstream...

SF600 ISP 烧录器

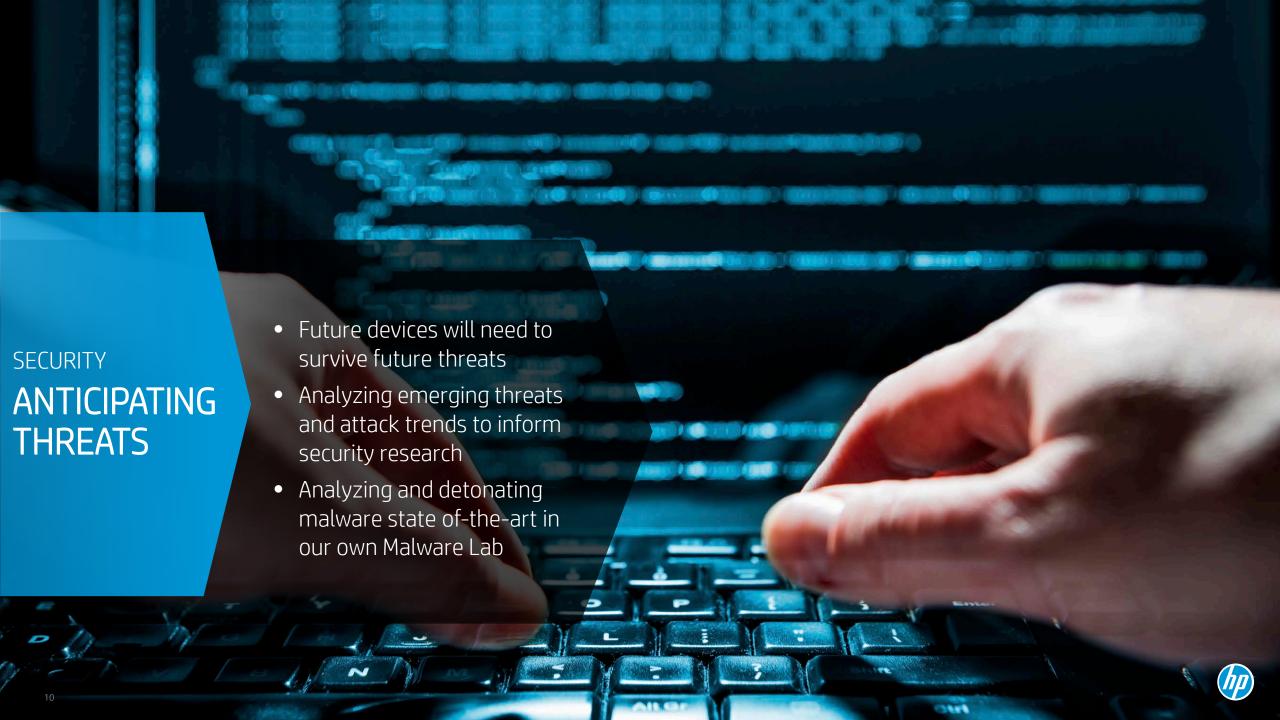

# ENDPOINTS ARE THE FIRST POINT OF ENTRY

Enterprise data center and cloud services

# SECURITY BUILT-IN FROM THE HARDWARE UP

Software / network security are not enough

Must start from the hardware up

# But Security is not only about Technology....

## HP Security Advisory Service

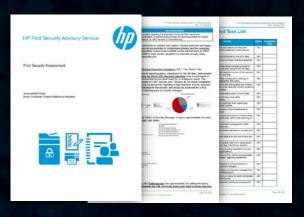

Onsite risk assessment

Identify the Risk & Estimate impact

Provide recommendations (security roadmap)

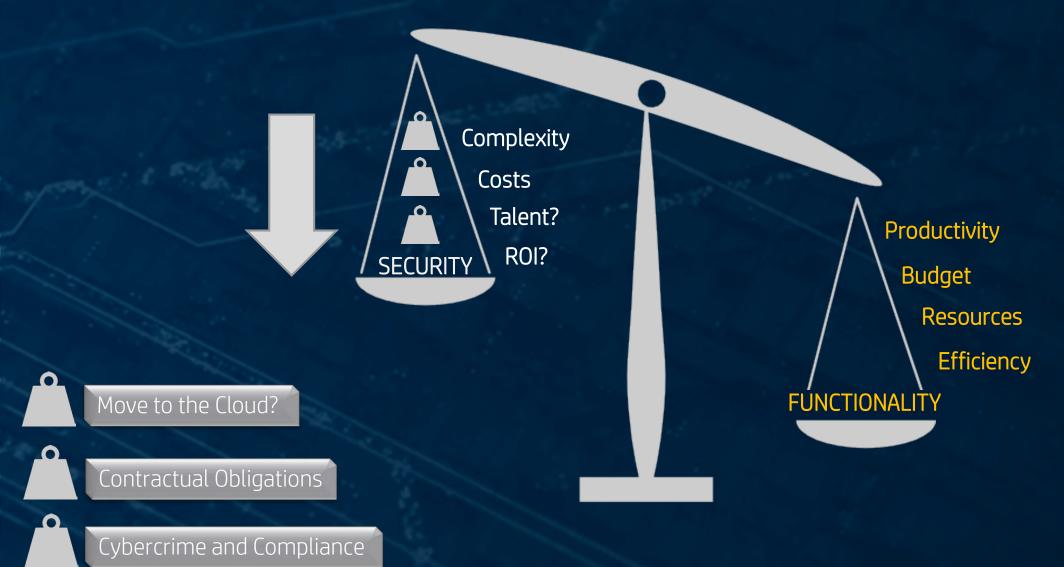

### The Classic Trade-Off

### SAS Results – Ugly Truths

Misalignment between Governance and Operations

Asset Management & Configuration

Patch Management

LifeCycle Management & Business Continuity

**Data Security** 

Logging and Monitoring Activities

### Top Findings

- 1. The printing environment is divided in a well-managed, centralised, environment (e.g. MFPs) and a decentralized, unmanaged environment (e.g. label printers, plotters). These unmanaged devices were found to be missing even the most basic security hygiene.
- 2. The whole printing environment is proactively managed, but there is no detective or reactive security component in place. Configuration or log event monitoring is non-existent and any security incidents originating from print solutions or devices may go unnoticed.

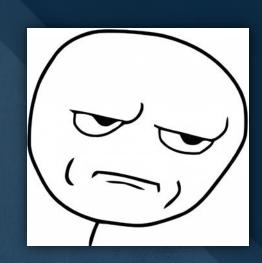

# Security by Obscurity

"If no one notices the endpoint is vulnerable, then it isn't vulnerable"

### Where have we seen all this before?

Legacy System compromised (1970!)

Inaccurate list of Assets

Disconnection between ITSEC and Operations

Security
Standards &
Guidelines not
enforced

IDS/IDS had expired SSL certificates

Upon update, immediate detection of suspicious traffic

Access Control not implemented correctly (DB access not restricted or monitored)

PII data, Usernames and Passwords stored in unencrypted files

Network
Segmentation
missing for the
compromised Apps.
(DMZ access to
parts of the
network)

### End to End Security

Security Services

Security assessments, security implementation, ongoing compliance, risk management

Management and monitoring solutions

End-to-end security and monitoring solutions (data, devices, documents...)

State of the art secure devices

Protection, detection and recovery capabilities at the deepest level
